Hinweise: [1] In der Statistik bezeichnet man für eine Wahrscheinlichkeitsfunktion das p%-Quantil (oder auch p-tes Perzentil oder Fraktil) als jenen Wert des Ereignisraumes, dem ein Wert von p% der Verteilungsfunktion zugeordnet ist. Es sind dann p% der Beobachtungen oder der Grundgesamtheit kleiner als das p%-Quantil. - [2] Rundenzeiten größer 10,000s werden als Anomalien gewertet - [3] Standardabweichung: Streuung der Rundenzeiten um ihren Mittelwert - **Allgemeine Hinweise:** die "b"-Werte auf der rechten Seite der Tabelle sind sog. "bereinigte" Werte. Bei der Berechnung werden Anomalien herausgerechnet. Mit einem * werden Gastfahrer gekennzeichnet, die nicht in die engültige Wertung übernommen werden.
